

Redline Derby Racing

Axle Alignment Jig

The Axle Alignment Jig helps keep your axles parallel when affixing them to the chassis.

1. ***Before you take the car apart***, put the car on the jig and slide the free alignment block so both the front and rear wheels sit snug in the blocks.
2. When you're ready to permanently place your axles, apply the adhesive, then quickly put the chassis back on the alignment blocks ***upside down***. Place a weight on top to apply pressure.
